

**NOTICE OF POSSIBLE LEASE OR SALE OF SURPLUS PROPERTY**  
**CHERRY CREEK BASIN WATER QUALITY AUTHORITY**

**NOTICE IS HEREBY GIVEN** that the Cherry Creek Basin Water Quality Authority (“CCBWQA”) has evaluated the condition and potential yield of its pre-SB213 nontributary well and water right commonly known as Well No. 2 – 10659-F (0.4456 cfs; approximately 80 ac-ft/year of estimated sustainable yield). CCBWQA seeks a Letter of Interest from any parties with a desire to lease and use such water. The water is readily deliverable to the streambed of Cherry Creek at its confluence with Piney Creek, a location approximately 1.5 miles upstream from Cherry Creek Reservoir, with installation of a short pipeline within an existing CCBWQA easement. CCBWQA is open to considering other delivery options as proposed by interested parties. The release of this nontributary water to the streamflow of Cherry Creek for use by others is generally beneficial to the purposes of CCBWQA and potentially to other parties. CCBWQA is accepting Letters of Interest up to and including April 23, 2021. After receipt of all Letters of Interest and review by an Interim Committee of CCBWQA Board Members, CCBWQA will entertain negotiations with interested parties concerning the terms of a lease or other arrangement for the beneficial use of water produced from Well No. 2. Questions concerning the well or water right should be directed to the District’s Manager, Chuck Reid, telephone number (303) 968-9098, and email address [chuck.reid@ccbwqa.org](mailto:chuck.reid@ccbwqa.org).

By Order of the Board of Directors.

CHERRY CREEK BASIN WATER  
QUALITY AUTHORITY
